INTERNATIONAL APPLICATION PUBLISHED UNDER THE PATENT COOPERATION TREATY (PCT)

(51) International Patent Classification⁶ : C12N 15/62, C07K 19/00, 14/82, 14/52, 14/78, 14/47, 16/18, 16/28, 16/44, C12N M1, 1/19, 5/10, A61K 38/17, 39/395, G01N 33/50 // (C12N 1/21, C12R 1:19)	A3	(11) International Publication Number: WO 96137621 (43) International Publication Date: 28 November 1996 (28.11.96)
(21) International Application Number: PCT/EP96/02230 (22) International Filing Date: 23 May 1996 (23.05.96) (30) Priority Data: 95107914.4 23 May 1995 (23.05.95) EP (34) Countries for which the regional or international application was filed: DE et al. (71) Applicant (for all designated States except US): MORPHOSYS GESELLSCHAFT FÜR PROTEINOPTIMIERUNG MBH [DWDE]; Frankfurter Ring 193a, D-80807 Munich (DE). (72) Inventors; and (75) Inventors/Applicants (for US only): PACK, Peter [DWDE]; Franz-Wolter-Strasse 4/III, D-81925 Oberföhring (DE). HOESS, Adolf [DWDE]; Wirtsbreite 21, D-83672 Warngau (DE). (74) Agent: VOSSIUS AND PARTNER; P.O. Box 86 07 67, D-81634 München (DE).	(81) Designated States: CA, CN, JP, US, European patent (AT, BE, CH, DE, DK, ES, FI, FR, GB, GR, IE, IT, LU, MC, NL, PT, SE). Published With international search report. Before the expiration of the time limit for amending the claims and to be republished in the event of the receipt of amendments. (88) Date of publication of the international search report: 3 January 1997 (03.01.97)	
(54) Title: MULTIMERIC PROTEINS (57) Abstract <p>The present invention relates to the construction and use of small multimerization devices, preferably of human origin, which self-assemble fused functional domains to multimeric and multifunctional complexes. Multimerization devices of this invention do not significantly interfere with secretion, expression yields and the independent folding of functional domains, which are attached via flexible but protease-resistant linkers. Modular gene cassettes encoding functional domains, linkers and multimerization domain can easily be combined to a cistron encoding the multimeric protein. Translation in a suitable host results in self-assembly to multimers larger than dimers. In cases, in which one or both functional domains are not expressible in sufficient yields or native fold in the same expression host, multimeric proteins can be produced, in which one or both functional domains or the multimerization device are produced separately by, e.g., in vitro translation, peptide synthesis and/or refolding and subsequently, e.g., chemically coupled to the remaining part of the multimeric protein.</p>

☒ Further documents are listed in the continuation of box C.

☐ Patent family members are listed in annex.

* Special categories of cited documents :

- 'A' document defining the general state of the art which is not considered to be of particular relevance
- 'E' earlier document but published on or after the international filing date
- 'L' document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- 'O' document referring to an oral disclosure, use, exhibition or

- 'T' later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- 'X' document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- 'Y' document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents
